DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 11-20, drawn to a nano-porous metal oxide semiconductor and photovoltaic device classified in class 428, subclass 304.4.
 - II. Claims 6-10, drawn to method of making the nano-porous metal oxide semiconductor, classified in class 427, subclass 343.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make other and materially different product such as sensitization of the nano-porous metal oxide semiconductor with metal chalcogenide having a band-gap of more than 2.9 eV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Christopher T. Griffith on 8/2/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1775

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
